StiffClip® LB

Spandrel Wall Bypass

Material Composition

ASTM A1003/A1003M Structural Grade 50 (340) Type H, ST50H (ST340H): 50ksi (340MPa) minimum yield strength, 65ksi (450MPa) minimum tensile strength, 68mil minimum thickness (14 gauge, 0.0713" design thickness) with ASTM A653/A653M G90 (Z275) hot dipped galvanized coating.

The attachment of StiffClip to the primary structure may be made with PAFs, screw/bolt anchors or weld and is dependent upon the base material (steel or concrete) and the design configuration.

Nomenclature

StiffClip LB is available for various stud depths. To specify, multiply stud depth by 100.

Example: 6" stud depth
Designate: StiffClip® LB600

Notes:

- Allowable load tables incorporate eccentric loading of fasteners. Values with a welded connection may increase.
- StiffClip LB resists horizontal and vertical loads.
- Allowable loads have not been increased for wind, seismic, or other factors.
- Loads listed reflect force in a single direction. When multiple loads react on the connection, it is the responsibility of the designer to check the interaction of forces.
- Torsional effects are considered on screw group for F3 allowable loads. It is assumed that half of the torsional moment is taken by the connection to the structure and half is taken by the connection to the stud.
- Design loads consider loads on the clip and #12 screw fasteners to the stud web.
- Strengthening ribs are present in 3 5/8", 6", and 8" sizes. StiffClip LB's 10" and 12" sizes contain 1/2" return lips on the top and bottom of the leg attaching to the stud for increased stiffness.

Screw Patterns

****Important Consideration:** Pattern diagrams indicate fastener placement only. Each standard StiffClip LB product comes with 4 predrilled guide holes shown in Patterns 1, 2, & 3. Alternate patterns can be implemented in the field or requested from TSN as a custom part.
